

# TQIP Guide + COA Explainer

## What is TQIP?

TQIP stands for Top Quality is Priority - our guiding principle across every dose, document, and decision at 503Boutsourcingone.

TQIP means:

- Every product is compounded under cGMP protocols
- Every cleanroom is ISO-8 certified
- Every lot is sterility- and potency-tested
- Every client receives COA documentation - no exceptions

We don't just claim quality - we document it.

## What is a COA (Certificate of Analysis)?

A Certificate of Analysis (COA) is a verified document that confirms:

- Active ingredient potency
- Sterility testing results
- Endotoxin screening
- Batch number and expiration (BUD)

At 503Boutsourcingone, every sterile medication ships with a COA - ensuring traceability, confidence, and compliance for your pharmacy or health system.

## Why It Matters to You

Whether you're a hospital, clinic, ASC, or GPO, TQIP and COA-backed compounds:

- Reduce regulatory risk
- Accelerate internal audits
- Protect your patients and brand
- Ensure lot-level transparency
